

Design: frameless.
Elegance: timeless.
SOLON Black 130/04

SOLON Black 130/04

Who says that practical solutions cannot be aesthetic? The SOLON Black 130/04 sets new standards in photovoltaic roof-mounted systems. It combines high-quality module design with a clever, patented mounting system and a strong yield performance.

Stylish.

For your high architectural demands: the completely black, square modules blend perfectly into the overall image of your roof and ensure an exceptionally harmonious appearance.

Frameless system.

The frameless design does not only look good. It also increases the efficiency: Since rain and dirt can freely flow off the modules, there will be no partial shading of the cells – thereby potential power losses are prevented. Snow can slide off the module perfectly, which protects the system and ensures high yields – even in winter.

Easy to install.

With the SOLON click system, the modules can be installed on the roof very quickly. The principle: First, the rails are mounted on the roof. Second, you simply hook the backrails of the module into the rails on the roof. Thanks to the SOLON click system you do not need any additional tools.

High stability.

The 4 mm thick solar glass and the mounting profiles on the rear make the SOLON Black130/04 extremely robust. The backrails are glued directly onto the module using a special adhesive technology that has been proven over many years. The SOLON Black 130/04 can also be used in heavy snow and windy areas thanks to its high load capacity.

Freedom of design.

Flexibility for individual solutions: The small and light-weight modules allow you to arrange the photovoltaic array in many different ways. However you arrange them: The efficiency and elegance of the SOLON Black 130/04 solar modules always remain the same.

SOLON advantages.

With a SOLON module you do not only enjoy first-class product quality. You also benefit from a comprehensive service package:

- > SOLON solar insurance for roof-mounted systems in Germany, Spain, Italy, Denmark, Poland, Czech Republic, Austria, Switzerland, France, Luxembourg, Belgium, Netherlands, Finland and Sweden
- > A 25-year SOLON performance guarantee
- > Personalized advice and support provided by our service team and our international sales partners
- > Just in time delivery
- > Free module recycling
